

Avalara Trade Compliance

Bridge the gap between enterprise procurement and customs compliance functions

Effectively managing the increasing complexity and stringency of cross-border trade demands an integrated, collaborative approach involving sales, sourcing, and logistics organizations.

Avalara Trade Compliance is a web-based platform that streamlines the collection, handling, and storage of customs' critical commodity information. Eliminate costly steps and facilitate collaboration by combining the functionality of our automated commodity classification and HS verification tools with our comprehensive global tariff data to ensure only one correct version of the truth is maintained and presented to customs – all in one place.

Benefits of using Avalara Trade Compliance:

Administrative controls with the ability to create separate profiles to segregate data, allowing:

- ✓ User created inference rules which can be automatically applied to assist with batch item classification.
- ✓ Partner collaboration with controlled access to specific profiles on a user-by-user basis.
- ✓ Classified and non-classified records can be uploaded, stored, and processed for complete compliance product database management.

Customs-ready audit trails, including:

- ✓ Up-to-date product information, including original goods description, including time, date, user ID, and transaction ID.
- ✓ Countries of origin and destination.
- ✓ Classification rationale citing HS General Rules of Interpretation and HS Section and Chapter Notes.
- ✓ Final HS and Tariff code results.
